Mr. T. H. Humpherys
State Engineer
State Capitol
Salt Lake City, Utah

Dear Sir:

Received your letter requesting me to inspect the Security Pipe Line Company, and report if they all were getting water.

There is three families that are not getting it only at times as they are on high points, and the water very short.

I have measured the water at the upper tank and it is at least $\frac{1}{2}$ gallon short to what it was when Mr. Hamming was here.

The supply at the wind mill is about the same and I have inspected there taps and can not find any one using any other than for their house use, however, if the hot weather or dry weather still lasts.

It is my belief the spring at the head will go dry, but I will do my best to try and see that they do not use any for any purpose other than house use, and will report to you again in the near future.

Respectfully,

George Blanthorn
